MSR Next Gen: Full Development Guide

Automated agency system banane ki poori practical guide (Hindi / Hinglish). Lead se payment, onboarding, delivery aur renewal tak.

Yeh guide kiske liye hai: tumhare (Mukul) liye, taaki tum samajh sako ki poora development kaise hoga, kahan dikkat aayegi aur kaise check karoge ki sab sahi chal raha hai. Antigravity agent ko dene ke liye **alag file** hai: `MSR_Antigravity_Agent_Brief.pdf` (aur `.md` version). Is guide ke aakhir mein tumhari **verification checklist** hai.

1. Yeh plan kahan se aaya aur kitna bharosa karein

Tumne GPT Astra se do documents nikale: ek **website audit + blueprint**, dusra **automation practical guide**. Maine dono ko jod kar development ke hisab se order, risks aur testing mein badla hai.

- Audit sirf **public website** (browser) se hua tha. Backend, database, payment webhooks aur dashboards kisi ne nahi dekhe. Isliye jo cheezein 'backend mein verify karni hain' woh abhi **unknown** hain, na pass na fail.
- Isi wajah se development ka **Phase 0 = sirf inspection (koi code change nahi)**. Pehle agent bataye ki asal mein kya bana hai, phir kaam shuru.
- Prices, refund rules, legal details, service area: yeh **business decisions** hain. Agent inhe khud decide ya invent nahi karega. Tumhe dene honge (Section 9).

2. Sabse badi rule: jo achha chal raha hai usko mat chhedo

Tumne bola ki colors aur background sahi lag rahe hain aur kuch systems pehle se ache bane hain. Agents ki aadat hoti hai 'improve' karte karte poora design ya working code badal dena. Isse bachne ke liye **Protected list** pehle din hi agent ko do.

Protected (change NAHI)	Kya matlab
Colors, background, brand look	Green/navy palette, backgrounds, gradients, logo, favicon. Naye pages bhi **wahi colors/tokens** use karein.
Existing pages ka layout	Homepage sections, Agents Hub, restaurant demo, AI Maya ka look. Sirf listed bugs fix hon.
Jo systems already working hain	Razorpay integration, `/portal` redirect, login/signup, demos, existing database data. Unko rewrite ya migrate nahi karna.
Existing hosting / providers	Naya tool tabhi jab koi capability missing ho, aur tumhari approval ke baad.

Teen category: agent ko kya karne ki permission hai

Category	Example	Rule
Seedha fix karo	Wrong 'Request Quote' routing, broken footer anchors, missing Forgot-password, 'Monthly Renewal' galat label, policy pages 404	Bug hai, fix karo. Pehle reproduce, phir fix, phir test.
Naya add karo (additive)	`/restaurants` page, assessment, proposal page, onboarding, admin dashboard	Existing design tokens aur components reuse. Purane pages tode bina.
Pehle tumse poochho	Font badalna (monospace to sans-serif), homepage chhota karna, navigation badalna, naya provider/database lana	Agent proposal + before/after screenshot dikhaye. Tum approve karo tab hi.

Audit ne monospace font ko dense bataya aur homepage ko lamba (approx 23,900 px mobile par). Yeh sujhav hain, tumhari colors wali approval ke saath conflict na ho isliye inko **'pehle tumse poochho'** category mein rakha hai. Colors/background kisi bhi case mein nahi badlenge.

3. Final system ek nazar mein

Restaurant landing page, short assessment, rules-based recommendation, no-call proposal, verified payment, client onboarding, shooter/editor tasks, client approvals, real reporting, renewal.

Layer	Kaam	Example
Website	Landing, assessment, proposal, checkout, portal UI	Existing site extend hogi
Database (sach ka record)	Leads, orders, payments, tasks, approvals, assets	Har state yahin save
AI (baat-cheet)	Sawal ka jawab, draft likhna, summary	Price/refund khud nahi banata
Rules engine	Eligibility, package recommendation, pricing	Fixed catalogue se, AI se nahi
Durable workflows	Reminders, retries, scheduled steps, failure recovery	Payment ke baad onboarding auto start
Notifications	Email / official WhatsApp (consent ke saath)	Opt-out par ruk jaye
Admin dashboard	Sirf exceptions dikhaye	Tum daily chase na karo

Core principle: AI baat kare, database record rakhe, workflows kaam chalayein. Payment, onboarding aur task creation ko ek lambe AI prompt ke bharose kabhi mat chhodo.

4. Phase-wise development plan

Har phase **ek-ek karke** Antigravity ko do. Ek saath sab kuch maangoge to agent bhoolega, shortcut lega ya fake features bana dega. Effort sirf relative hai (Chhota / Madhyam / Bada); exact time isliye nahi bata raha ki tumhare codebase ki sthiti abhi unknown hai.

Phase 0: Inspection aur backup (code change nahi) [Chhota]

Goal: Agent poora repository aur setup samjhe aur tumhe report de.

- Git mein current state ka backup/tag aur naya branch (`dev-main`) banao.
- Agent `INSPECTION_REPORT.md` banaye: tech stack, folders, database, auth, payment flow, AI prompts jahan prices likhe hain, env variables ke **naam** (values nahi), hosting.
- Protected assets ka inventory: colors/tokens, fonts, components, har major page ke screenshots (desktop + mobile) **before** state ke taur par.
- Audit ke saare findings ko reproduce karke confirm kare (kaun sach, kaun already fixed).
- Backend ke unknown points ki list: webhook hai ya nahi, signature verify hota hai ya nahi, data isolation, etc.

Done tab maano jab: Report mil gayi, tumne padh li, aur agent ne likha ki kya 'unknown' hai. Is phase mein koi file edit nahi hui.

Phase 1: Blockers fix (paid ads se pehle zaroori) [Madhyam]

Goal: Website par bharosa aur consistency. Yahi sabse pehle kaam hai.

- **Single price catalogue** (versioned): website, AI Maya, sales agent, proposal, checkout sab usi se data lein. AI ka koi price hardcoded nahi.
- AI guardrail: price, GST, discount, refund, delivery promise khud na banaye. Pata na ho to bole 'is detail ki confirmation pending hai'.
- Mobile App 'Request Quote' sahi flow mein jaye (custom brief), WhatsApp AI Starter checkout nahi. `service_id` poori journey mein preserve.
- Policy pages: Terms, Privacy, Refund/Cancellation, Contact/legal identity. Footer aur checkout se link. **Text tum/CA/lawyer se aayega**, agent placeholder structure banaye.
- Checkout labels: har package par 'Aaj payable / recurring / usage / third-party cost / tax / cancellation'. One-time par 'Monthly Renewal' nahi.
- Mobile checkout: dedicated page, total aur Pay button visible, floating chat/WhatsApp buttons checkout par hide, rupee glyph/font fallback check.
- Login: Forgot password, show/hide password, business category default 'Gym' hataye ('Select your business').
- Footer anchors: `/#services`, `/#brands`, `/#case-study`, `/#about` shared footer mein.
- Demo labels: 'Sample', 'Interactive sandbox', 'Connected production agent' alag. Public UI se 'Baileys worker / QR' wala developer text hatao.
- Sales-demo chat: incomplete answer aur raw `markdown` render fix.
- Dialog accessibility (Escape se band, focus), baseline security headers, canonical/sitemap/domain alignment.

Done tab maano jab: Tumhari Section 8 ki checklist ke A, B, C, D, E, F aur N sections pass.

Phase 2: Restaurant funnel (front side) [Madhyam]

Goal: Ek niche ke liye self-serve rasta: landing, assessment, recommendation, proposal.

- `/restaurants` landing: restaurant-specific headline, primary CTA 'Mera Growth Plan Dekhein', secondary 'Restaurant Demo Dekhein'. 'Talk to Founder' sirf optional.
- `/assessment`: pehle chhote sawal (business type, city, goal, existing links, budget range, start time). Contact details aur consent **baad mein** plan save/send karne ke liye.
- Rules engine: service area, budget fit, shooting capacity, standard vs custom. Output: 1 recommended package + kyun + exclusions. Custom ho to review queue, unfit ho to helpful alternative.

- `/plan/<id>` proposal: goal, deliverables, exclusions, first delivery plan, client responsibilities, fee breakup, terms, 'Accept & Pay'.
- Restaurant demo: guest access pehle, details optional, 'Get this for my restaurant' CTA, 'Demo only' clearly, real kitchen notification se alag.

Done tab maano jab: Naya visitor bina call ke assessment se proposal tak pahunch jaye, mobile par bhi.

Phase 3: Payment aur orders ko reliable banana [Bada]

Goal: Paisa aaya to system ko pakka pata ho. Browser popup par bharosa nahi.

- Flow: approved proposal, **server par order create**, Razorpay checkout, **webhook + signature verify**, order paid, workspace/onboarding.
- Server catalogue se total nikale; amount/currency/order match kare.
- Idempotency: same webhook do baar aaye to duplicate order/project/invoice nahi.
- States: pending, failed, cancelled, paid. Pending par 'verification pending' dikhao, premature success nahi.
- Recovery: payment ho gayi par onboarding fail: recovery queue. Browser band ho gaya: tab bhi order recover.
- Invoice/receipt, refund aur renewal states reconcile. Auto-debit claim tabhi jab asli subscription/mandate ho.
- **Sirf test mode.** Live keys agent ko nahi dene.

Done tab maano jab: Section 8 ke G (payment) items test mode mein pass.

Phase 4: Onboarding aur client portal [Bada]

Goal: Payment ke baad client ko guided checklist mile, same details dobara na bharne pade.

- Purchase ko verified account se link karo (sirf typed phone number ownership ka proof nahi).
- Checklist (progress save): business profile, brand assets (logo/menu), account permissions, offer/brand rules, shoot scheduling, first approval.
- Private file storage, limited-access links, bade video files ke liye resumable upload.
- Account access sirf official delegated access se. Passwords/OTP kabhi nahi.
- Targeted reminders ('menu pending hai, menu aate hi content planning aage badhegi'). Bar-bar reminder ke baad exception queue.
- Roles: client, editor, shooter, operations, admin: alag permissions. Har client ka data isolated.

Done tab maano jab: Naya test client onboarding poori kar le aur dusra test client uska data kabhi na dekh paye.

Phase 5: Delivery automation [Bada]

Goal: Payment ke baad shooting/editing team ko clear task cards.

- Project ban jaye, tasks auto: shoot brief, shoot schedule, footage upload, editing, internal QC, client approval, publish.
- Shooter card: location, schedule, contact, shot list, deliverables, upload instructions. Editor card: footage link, script, aspect ratio, brand assets, due date, revision allowance.
- Client approval screen: preview, approve, change request, comments, version history. Default: **client approval ke bina publish nahi**.
- AI scripts, captions, shot lists, summaries bana sakta hai; QC human kare (claims, music rights, brand mistakes).

Done tab maano jab: Ek test project shoot se approval tak chal jaye aur revision history save ho.

Phase 6: Follow-ups, reporting, renewal [Madhyam]

Goal: Consent-based follow-up aur asli data ke reports.

- Follow-up sequence: plan bheja, case study, scope clarification, final reminder, phir stop. Reply/payment/decline/opt-out par turant stop.

- WhatsApp: official platform, opt-in record, approved templates, opt-out respect, human escalation. Number scraping aur bulk unsolicited messages nahi.
- Reports: sirf connected data. Data na ho to 'Not connected / Data pending', fake charts nahi.
- Renewal reminders, feedback; discount aur disputed billing human ke paas.

Done tab maano jab: Opt-out ke baad koi promotional message nahi jata; reports mein sirf asli data.

Phase 7: Admin exception dashboard + tracking [Madhyam]

Goal: Tumhara kaam chase karna nahi, sirf exceptions dekhna.

- Queues: naye qualified leads, custom proposals, payment reconciliation, missing assets/access, upcoming shoots, overdue edits/approvals, automation failures, complaints/refunds, renewals at risk.
- Events: `landing_view, assessment_started, assessment_completed, qualified_lead, proposal_viewed, checkout_started, payment_verified, onboarding_completed, service_live, renewed.` UTM source order aur renewal tak.
- WhatsApp click ko lead ya sale nahi gino. Tracking mein password/chat PII nahi.

Done tab maano jab: Ek test lead ka source se payment tak ka poora trail dikhe.

Phase 8: Controlled launch aur scaling [Chhota (par discipline zaroori)]

Goal: Pehle ek niche, ek offer, ek geography. Phir traffic.

- Ad spend ka cap aur stop rules pehle define. AI ko unlimited budget nahi.
- Measure: qualified lead cost, lead se paid conversion, CAC, onboarding completion, delivery cost/margin, retention, refunds.
- Likes, raw leads aur chatbot messages ko success mat samjho.

Done tab maano jab: Section 8 ka P (launch gate) poora tick.

5. Data model (agent ko diya jayega, tumhe samajhna kaafi hai)

Table	Kya rakhta hai
services / price_versions	Approved catalogue aur uske purane versions (har proposal kis version par bana)
leads / consents	Assessment answers, source (UTM), consent ka record aur opt-out
proposals	Recommended package, scope, fee breakup, validity, accept hua ya nahi
orders / payment_events	Server order, gateway ids, har webhook event (duplicate-safe)
clients / projects	Verified account se linked client, uske projects
tasks / assets / approvals	Shooter/editor tasks, private files, approval aur revision history
support_tickets / audit_logs	Complaints, aur paise/approval/account changes ka trail

6. Kya kya dikkat aayegi (aur kaise bachein)

Yeh real risks hain jo AI-agent se banate waqt aksar aate hain. Har ek ke saamne bachav likha hai.

#	Dikkat	Kyun aati hai	Bachav
1	Agent design/colors badal deta hai ya working code tod deta hai	Woh 'improve' karne ki koshish karta hai	Protected list, before/after screenshots, git branch, har phase ke baad diff review
2	Prices alag-alag jagah alag	Website, AI prompt aur checkout mein hardcoded	Ek versioned catalogue, grep se hardcoded price check
3	AI galat price/refund bol deta hai	LLM bhar deta hai jo nahi pata	Catalogue tool se hi price, unknown par 'pending confirmation', test sawalon se jaanch
4	Paisa gaya par client ko access nahi	Sirf browser success par bharosa	Webhook + server verification + recovery queue
5	Duplicate webhook se double project/invoice	Gateway events retry karta hai	Idempotency key / event id unique
6	WhatsApp number ban ya policy problem	Unofficial QR (Baileys) aur bulk/unsolicited messages	Official Cloud API/provider, opt-in, templates, opt-out
7	Ek client ka data dusre ko dikhe	Permission checks adhoore	Row-level isolation, do test accounts se cross-check
8	Agent fake auth/payment/metrics bana ke 'done' bol de	Demo jaldi chalane ka shortcut	Brief mein 'no fakes' rule, har phase par evidence (screen recording + test output)
9	Agent lambe kaam mein bhool jaye	Context limit	Ek phase ek time, written spec, har phase ke baad report
10	API keys / secrets code mein chale jayein	Quick hack	Sirf env variables, keys chat mein mat paste karo, `.env` git mein nahi
11	Test mein asli paisa/message chala jaye	Live keys use ho gayi	Test mode only, live keys launch ke din tum khud lagao
12	Domain/DNS/SSL issue (audit mein fetch fail hua)	Custom domain adhoora connect	Phase 1 mein verify, canonical aur sitemap same domain par
13	Mobile par checkout toot jaye	Sirf desktop par test	Asli phone par test (390 px width aur ek chhota Android)
14	Legal text galat/adhoora	Agent policy khud likhega to invent karega	Text tum + CA/lawyer se final karo; main lawyer nahi hoon, GST/refund wording professional se check karao
15	Shoot capacity ya delivery team ki kami	Automation orders le leti hai par shoot koun karega	Capacity rule engine mein, limit par waitlist

#	Dikkat	Kyun aati hai	Bachav
16	Video footage ka storage cost/upload fail	Bade files	Resumable upload, storage cost pehle estimate, purani raw files ka retention rule
17	AI API cost badh jaye	Har chat mein lamba prompt	Usage cap, short prompts, monthly budget alert
18	Ads ka paisa waste	Tracking adhoori ya funnel unready	Phase 7 ke baad hi traffic, spend cap
19	Scope creep (11 services ek saath)	Sab automate karne ka mann	Pehle restaurant niche, ek journey poori
20	Tum bottleneck ban jao	Exceptions ka system nahi	Admin exception dashboard, ek operations partner

7. Antigravity ke saath kaam karne ka tareeka

- **Pehle backup:** poora code git mein commit karo ya folder ki copy rakho. Agent kuch tode to wapas aa sako.
- **Brief file do, phir Phase 0 hi bolo:** 'Brief padho, sirf Phase 0 karo, koi code change mat karo.'
- **Ek phase ek time.** Phase khatam hone par agent se report maango (kya badla, kaunsi files, kya test hua, kya baaki).
- **Evidence maango:** screenshots (desktop + mobile), test output, screen recording. Sirf 'done' kaafi nahi.
- **Tum checklist chalao** (Section 8). Fail hone par wahi item agent ko wapas do.
- **Secrets:** API keys, Razorpay keys, WhatsApp tokens chat mein paste mat karo. `.env` mein khud daalo.
- **Rollback:** koi phase bigad jaye to us phase ka branch/commit revert karo. Isiliye har phase alag commit.

Har phase ka prompt (copy-paste)

Brief file attach karke likho: **'MSR_Antigravity_Agent_Brief padho. Ab sirf [Phase N] karo. Protected assets ko mat chhedo. Pehle apna plan likho aur mere approval ka wait karo. Kaam ke baad report format (Section 15) mein report do.'**

8. Tumhari verification checklist: system sahi chal raha hai ya nahi

Har item mein likha hai **kya karna hai** aur **kya dikhna chahiye**. Result ke saamne **Pass / Fail** likho. Test mode mein hi karo, asli paisa mat do.

A. Design safe hai? (sabse pehle)

#	Kya karo	Kya dikhna chahiye	P/F
A1	Phase ke baad homepage, Agents Hub, restaurant demo kholo, purane screenshots se compare karo	Colors, background, logo, layout wahi. Sirf listed fix badle	
A2	Mobile par (phone) wahi pages kholo	Koi naya overlap/cut-off nahi	
A3	Naye pages (restaurants, assessment, plan) dekho	Wahi green/navy look, alag style nahi	

B. Pricing ek jaisi hai?

#	Kya karo	Kya dikhna chahiye	P/F
B1	Website par kisi ek service ki price note karo	Checkout, proposal mein same price	
B2	AI sales agent se poochho: 'WhatsApp AI ka fee, GST, refund kya hai?'	Catalogue wali price, ya 'confirmation pending'. Koi naya amount nahi	

#	Kya karo	Kya dikhna chahiye	P/F
B3	AI Maya se wahi sawal	Sales agent jaisa hi jawab	
B4	AI se bolo 'discount de do' / 'refund pakka hai na?'	Woh commit na kare, human/policy par bheje	
B5	Chat mein lamba jawab maango	Beech mein cut nahi, ** jaisa raw markdown nahi	

C. Har button sahi jagah le jata hai?

#	Kya karo	Kya dikhna chahiye	P/F
C1	Mobile App Development par 'Request Quote' dabao	App brief form, WhatsApp AI Starter checkout nahi	
C2	Har service ka CTA ek-ek karke dabao	Usi service ka flow/checkout	
C3	`/agents` par footer 'Flagship Services/Brands/Case Study/About' dabao	Homepage ke sahi section par jaye	

D. Policies aur legal

#	Kya karo	Kya dikhna chahiye	P/F
D1	Footer aur checkout mein Terms, Privacy, Refund/Cancellation dhundo	Teeno links hain, 404 nahi	
D2	Payment se pehle checkout dekho	Legal naam/contact, tax, refund/cancellation, delivery timeline, exclusions dikhein	
D3	Policy text padho	Tumhare (aur CA/lawyer ke) approve kiye hue words, placeholder/TODO nahi	

E. Mobile checkout

#	Kya karo	Kya dikhna chahiye	P/F
E1	Asli phone par kisi package ka checkout kholo	Total aur Pay button bina dhundhe dikhe	
E2	Checkout par dekho	Floating WhatsApp/chat button upar nahi	
E3	Prices dekho	Rupee sign sahi (box nahi)	
E4	One-time package (Business Website) lo	'Monthly Renewal' nahi dikhna chahiye	
E5	Checkout par Escape/close	Dialog theek se band ho	

F. Login aur account

#	Kya karo	Kya dikhna chahiye	P/F
F1	Login page par dekho	'Forgot password' hai, reset link/OTP aata hai	
F2	Signup kholo	Category 'Select your business', Gym default nahi	
F3	Bina login `/portal` kholo	Login par redirect	

G. Payment (TEST MODE)

#	Kya karo	Kya dikhna chahiye	P/F
G1	Test payment success	Order 'paid', receipt, onboarding link, sahi package active	
G2	Test payment fail aur cancel	Sahi error/retry screen, koi package active nahi	
G3	Payment ke turant baad browser tab band karo, thodi der baad portal kholo	Order recover hua, onboarding mil gaya	

#	Kya karo	Kya dikhna chahiye	P/F
G4	Pending payment (agar gateway test mein possible)	'Payment verification pending', success nahi	
G5	Developer se duplicate webhook test karwao	Sirf ek order/project/invoice	
G6	Dashboard mein order check	Amount, package, status sahi, purchase isi account se linked	

H. Onboarding

#	Kya karo	Kya dikhna chahiye	P/F
H1	Naye test client se onboarding shuru karo, beech mein chhodo, wapas aao	Progress save mila	
H2	Menu/logo upload karo	Upload ho gaya, sirf wahi client dekh sake	
H3	Kuch pending chhodo	Specific reminder aaye ('menu pending hai...')	
H4	Chat/form dekho	Password ya OTP kahin nahi manga	

I. Delivery

#	Kya karo	Kya dikhna chahiye	P/F
I1	Test project banao	Shooter aur editor ke task cards auto bane	
I2	Editor ko footage/brief ke saath card dikha	Sab details hain (due date, revisions, assets)	
I3	Client portal mein deliverable approve ya 'changes' maango	Status badle, comments aur version history save	
I4	Bina approval publish try karo	Publish nahi hona chahiye (jab tak pre-authorized na ho)	

J. Data isolation (bahut zaroori)

#	Kya karo	Kya dikhna chahiye	P/F
J1	Do test clients A aur B banao. A login karke B ke project ka link/ID try kare	Access denied	
J2	Editor/shooter login se admin ya payment page kholo	Nahi khulna chahiye	
J3	Private file ka direct link logout karke kholo	Nahi khulna chahiye	

K. Follow-up aur consent

#	Kya karo	Kya dikhna chahiye	P/F
K1	Assessment bina consent ke submit	Marketing follow-up consent ke bina nahi	
K2	Follow-up sequence mein ho, tab reply/payment karo	Sequence ruk/badal jaye	
K3	STOP / opt-out bolo	Uske baad promotional message nahi aata	

L. Admin exceptions

#	Kya karo	Kya dikhna chahiye	P/F
L1	Jaan-bujh kar ek automation fail karwao (developer se)	Admin queue mein dikhe aur payment/workspace fail na ho	
L2	Missing assets, overdue approval, complaint	Sahi queue mein entry	

M. Tracking

#	Kya karo	Kya dikhna chahiye	P/F
M1	UTM wale link se test lead banao, payment tak le jao	Source order tak trace hota hai	
M2	Events dekho (analytics debug)	Funnel events sahi order mein, WhatsApp click lead nahi gina	
M3	Events mein check	Password/chat PII nahi	

N. Domain, SEO aur security basics

#	Kya karo	Kya dikhna chahiye	P/F
N1	Apna main domain browser mein kholo	HTTPS ke saath khulta hai, certificate sahi	
N2	Page source mein canonical aur `/sitemap.xml`	Wahi primary domain, sitemap mein important pages	
N3	Security headers check (securityheaders.com)	X-Content-Type-Options, Referrer-Policy, HSTS present	

O. Honest claims

#	Kya karo	Kya dikhna chahiye	P/F
O1	Case study / agent cards padho	Date range, baseline, source ya 'illustrative' likha. Bina proof ke exact % nahi	
O2	'Guaranteed sales', '100%' jaise words dhundho	Nahi hone chahiye	
O3	Demo pages dekho	Sample / Sandbox / Live alag clearly labelled	

P. Launch gate (ads chalane se pehle sab tick)

#	Kya karo	Kya dikhna chahiye	P/F
P1	Section A se O tak	Sab Pass	
P2	Ek real restaurant owner ko friend-test (bina tumhari madad ke)	Proposal tak khud pahunch gaya	
P3	Ad spend cap aur stop rule likha hai	Haan	
P4	Operations partner/responsible person fix	Haan	
P5	Live keys tumne khud lagayi, pehla live transaction chhota amount se test	Success + refund test	

9. Decisions jo tumhe pehle leni hain

Inke bina agent ko placeholder se kaam chalana padega. Yeh sab ek jagah likh lo aur Phase 1 se pehle agent ko do.

- Pehla niche (recommended: restaurants/cafes) aur service area (kaunse shehar).
- Teen packages ki **package sheet**: kya milega (reels/posts/shoot hours), revisions, travel, timeline, setup fee, monthly fee, ad spend included/separate, usage charges, tax, cancellation/refund, kya included nahi, client ko kya dena hai.
- Final prices (apni actual cost nikalkar: shooting, editing, travel, software, AI usage, support, rework).
- Legal business name, address, GST details, refund/cancellation rules (CA/lawyer ke saath).
- WhatsApp provider: official Cloud API ya authorized provider.
- Operations partner kaun hoga (complaints, refunds, QC) aur shoot capacity kitni.
- Primary domain kaunsa.
- Ad spend cap aur approval rule.

10. Aage ka seedha raasta

- **Aaj:** Section 9 ki decisions likho, package sheet bharo.
- **Phir:** Antigravity ko Brief + Phase 0 do. Report padho.
- **Phir:** Phase 1 (blockers). Section 8 ke A-F, N, O chalao.
- **Phir:** Phase 2 se 7, ek-ek karke, har ke baad checklist.
- **Last:** Launch gate (P). Tabhi ads.

Yeh guide development ka plan hai, guarantee nahi. Koi bhi conversion %, client count ya ROAS predict nahi kiya ja sakta. Legal, tax aur refund wording ke liye CA/lawyer se confirm karo.
